## 16 **Abstract**

17 The charter of the working group was to provide a standard, interoperable platform for  
18 supply chain partner compliance with state, regional and national drug pedigree laws.  
19 While this was the impetus of the work, there is nothing implicit in the deliverable that  
20 inhibits its use globally where a document pedigree is required. The conformance  
21 requirements contained herein are designed to ensure that the most common use cases are  
22 articulated and that the standard will effectively support those.

## 23 **Status of this document**

24 This section describes the status of this document at the time of its publication. Other  
25 documents may supersede this document. The latest status of this document series is  
26 maintained at the EPCglobal. This document has been reviewed by the working group  
27 and is in its final form of delivery to EPCglobal.

## 104 **1. Introduction**

105 Testing an implementation of pedigree management software for conformance with the  
106 EPCglobal Drug Pedigree 1.0 Specification is fundamentally different from the testing of  
107 other EPCglobal specifications. Since this is a document specification, the user interfaces  
108 and programming interfaces are NOT part of the testing. The nature of this specification  
109 allows for focused testing on the output document within the specific set of input data  
110 and business process steps since the pedigree *document* must be interoperable between all  
111 implementations. The vendor interface implementations are inconsequential to the  
112 specification.

## 113 **2. Scope**

114 A Drug Pedigree Conformance Certification Program will focus on testing a given  
115 application's conformance to the Drug Pedigree 1.0 Specification. These test case  
116 requirements were developed by the EPCglobal SAG Drug Pedigree working group.

117 A Drug Pedigree Conformance Certification Program is NOT intended to test the  
118 performance, reliability, or scalability of the tested product.

## 119 **3. Program Overview**

120 The Drug Pedigree Certification Program will be offered by a certified testing laboratory  
121 to solution providers enrolled in the certification program.

122 Program Implementation and Certificate definition are to be defined by EPCglobal US  
123 and a chosen Testing Laboratory.

124 The conformance tests may not be exhaustive, but should be representative of capabilities  
125 needed for a successful Drug Pedigree implementation. The tests should be defined to be  
126 platform independent, and should not require products to be implemented on any  
127 particular system or platform.

## 128 **4. Terminology**

129 This document adopts terminology developed by the World Wide Web Consortium  
130 [W3C-Conformance]:

131 *Certificate Issuer* The organization that issues certificates of conformance, namely,  
132 EPCglobal.

133 *Testing Laboratory* An organization that carries out certification testing on behalf of the  
134 Certificate Issuer

135 *Specification* An EPCglobal specification for which conformance is tested.

136 *Implementation Under Test (IUT)* A submission of hardware and/or software for which  
137 certification is sought by an EPCglobal subscriber.

138 *System Under Test (SUT)* The IUT together with any other apparatus required to carry  
139 out the test.

140 *Test Method* A description of the test that is applied to the SUT. There may be more  
141 than one Test Method available for a given Drug Pedigree 1.0 specification  
142 requirement, each providing a different level of conformance testing.

143 *Test Report* Quoting from [W3C-Conformance]: “A Test Report contains the results of  
144 the testing effort. The test report should provide enough information that, if  
145 necessary, the testing effort could be duplicated. The testing report should contain:

- 146 • a complete description of the IUT,
- 147 • the name of the Testing Laboratory,
- 148 • the signature of a Testing Laboratory official,
- 149 • the date that the testing was completed,
- 150 • the name and version number of the Test Method
- 151 • the results of the Test Method
- 152 • an unambiguous statement indicating pass or fail.”

153 *Drug Pedigree Conformance Certification Program* An EPCglobal US sponsored  
154 Software/Hardware solution certification program measuring Drug Pedigree 1.0  
155 conformance.

156 *Certificate of Conformance* Quoting from [W3C-Conformance]: “The certificate of  
157 conformance is typically a summation of the Test Report. Since it is often used in the  
158 procurement process, it includes information most pertinent between the buyer and  
159 the seller.”

## 160 **5. Submission Requirements**

161 [ defined by EPCglobal and the Testing Lab ]

## 162 **6. Test Protocols**

163 [ defined by EPCglobal and the Testing Lab ]

## 164 **7. Drug Pedigree 1.0 Functional Requirements**

165 The Drug Pedigree 1.0 Specification defines specific functionality that a valid Drug  
166 Pedigree Implementation must provide. The following tables outline the specific  
167 requirements that must be tested as defined by the Drug Pedigree 1.0 specification. Each  
168 test requirement entry references the Drug Pedigree 1.0 Specification and the test case  
169 requirement (TCR) used to verify functionality as defined in section 8 of this document.

### 170 **7.1. Mandatory Requirements Matrix**

171 The following table outlines the mandatory requirements for a Drug Pedigree  
172 implementation as defined by the Drug Pedigree 1.0 Specification.

Req. No.	Protocol SubClause	Requirements (Requirements, Command, ...)	Applies to (ref)	How Verified (by Demonstration or by Design)
M1	6.1	X.509 certificates SHALL be used for the Electronic Pedigree		Demonstration
M2	6.2	The electronic pedigree digital signature processes SHALL conform to the X.509 certificate profile defined in the EPCglobal Certificate Profile version 1.0.		Demonstration
M3	6.2	Certain attributes SHALL be included in the certificate to provide this uniqueness.		Demonstration
M4	6.2	To ensure users can be uniquely identified when digitally signing electronic pedigrees, user certificates SHALL include the minimum attributes specified in Section 3.2.1 of the EPCglobal Certificate Profile version 1.0		Demonstration
M5	6.2	Certificates SHALL also include the user's RFC822 email address in conformance with the profile requirements		Demonstration
M6	6.2	To ensure servers can be uniquely identified when digitally signing electronic pedigrees, server certificates SHALL include the server's FQDN in conformance with the profile requirements.		Demonstration
M7	6.3	The Signature Method SHALL support the use of FIPS 186-2. The RSA algorithm [2, 14] SHALL be supported.		Demonstration
M8	6.3	The Digest Method SHALL support the use of FIPS 186-2. SHA1 [2, 14] algorithm.		Demonstration
M9	6.3	The Exclusive C14N XML Canonicalization method, without comments, described in W3C Exclusive XML Canonicalization Version 1.0 [12] SHALL be employed for both canonicalization and transforms.		Demonstration
M10	6.3	The inclusive namespaces PrefixList attribute SHALL support prefixes in any order within the string.		Demonstration

M11	6.3	The inclusive namespaces PrefixList attribute SHALL support arbitrary whitespace before, after and between the prefixes within the string	Demonstration
M12	6.3	Any inclusive namespaces SHALL contain the prefix of all namespaces that are in-scope and desired to be protected, but not visibly utilized, for the element being signed and its descendants.	Demonstration
M13	6.3	Any inclusive namespaces SHALL contain the string "#default" if a default namespace is in-scope and desired to be protected, but not visibly utilized, for the element being signed and its descendants.	Demonstration
M14	6.3	The same-document URI reference SHALL be employed. See section 4.3.3.3 of <a href="http://www.w3.org/TR/xmlsig-core">http://www.w3.org/TR/xmlsig-core</a>	Demonstration
M15	6.3	XPATH SHALL NOT be used for specifying references.	Demonstration
M16	6.3	The KeyInfo element SHALL be present in the Signature element.	Demonstration
M17	6.3	In the KeyInfo element the use of X.509 SHALL be employed.	Demonstration
M18	6.3	The KeyInfo element SHALL include one and only one X509Data element and it SHALL be the only element supported.	Demonstration
M19	6.3	The single X509Data element SHALL include one and only one X509IssuerSerial element that identifies the signer's certificate and one X509Certificate element that contains the signer's certificate.	Demonstration
M20	6.3	The validation of digital signatures applied to electronic pedigrees SHALL conform to the following requirements and the Certificate Profile referenced above.	Demonstration
M21	6.3	The core validation method described in section 3.2 of <a href="http://www.w3.org/TR/xmlsig-core">http://www.w3.org/TR/xmlsig-core</a> SHALL be employed	Demonstration

M22	6.3	The signer's certificate SHALL be validated in accordance with section 6 of RFC 3280 [9].	Demonstration
M23	10	Conforming implementations SHALL use the pedigree schema for all input and output documents.	Demonstration
M24	10	All schema elements marked as "Yes" in the "Mandatory" column in the tables below SHALL be included in all pedigree documents	Demonstration
M25	10	The value supplied in these elements SHALL be non-null.	Demonstration
M26	10	All schema elements marked as "Conditional" in the "Mandatory" column in the tables below SHALL be included in pedigree documents that are subject to the situations that require them.	Demonstration
M27	10	The value supplied in these elements SHALL be non-null, unless the nillable attribute is explicitly set in the element.	Demonstration
M28	10	All schema elements marked as "No" in the "Mandatory" column in the tables below SHALL be optional in pedigree documents.	Demonstration
M29	10	Conforming implementations SHALL offer the Pedigree Envelope schema as an optional way to package one or more pedigree documents for transmission.	Demonstration
M30	10	All schema elements on incoming pedigrees and pedigree envelopes, regardless of marking, SHALL be accepted and handled properly. "Handled properly" CAN be interpreted as "ignored" for elements not marked as "Mandatory" or "Conditional".	Demonstration
M31	10	The schemas for the Pedigree and Pedigree Envelope are separate schemas and SHALL be versioned independently of each other.	Demonstration
M32	10	Enumerated lists included in the schema SHALL use the UpperCamelCase capitalization style for new items added to enumerated lists (e.g., ReceivedAndAuthenticated).	Demonstration

M33	10	If an enumeration is an acronym or contains an acronym, the acronym SHALL be specified in all uppercase (e.g., GLN).	Demonstration
M34	10.2	The innermost component of the pedigree SHALL always be contained in an <code>initialPedigree</code> or a <code>repackagedPedigree</code> element.	Demonstration
M35	10.2	New pedigrees created by manufacturers or wholesalers for standard (non-repacked) prescription drug products SHALL always be started in an <code>initialPedigree</code> element.	Demonstration
M36	10.2	Pedigrees for repackaged or kitted products (where the kit has its own NDC) SHALL always be started in a <code>repackagedPedigree</code> element.	Demonstration
M37	10.2	The <code>pedigree</code> element is a wrapper element that contains a signed pedigree representing the prior chain of custody for an item. Information associated with each stage in a pedigree transaction in which ownership of an item passes from one supply chain partner to another SHALL be added to the pedigree in its own layer and then digitally signed by that supply chain partner.	Demonstration
M38	10.2	The <code>shippedPedigree</code> and <code>receivedPedigree</code> elements represent a stage (shipping or receiving) in a pedigree exchange transaction in which ownership of a product passes from one supply chain partner to another. These elements SHALL be used to wrap the preexisting pedigree for a product.	Demonstration
M39	10.2	Signatures SHALL be applied over <code>shippedPedigree</code> or <code>receivedPedigree</code> elements, signing over new content added to the pedigree and any prior pedigree content from previous transactions.	Demonstration

M40	10.2	At any given time, the outermost pedigree element SHALL contain a shippedPedigree and a Signature element, or a receivedPedigree and a Signature element.	Demonstration
M41	10.2	As each transaction occurs, the preexisting pedigree for an item SHALL be wrapped inside of a pedigree layer element.	Demonstration
M42	10.2.2	Carriage return and line feed characters SHALL NOT appear in any string elements.	Demonstration
M43	10.2.2.1	Information associated with each stage in a pedigree transaction in which ownership of an item passes from one supply chain partner to another SHALL be added to the pedigree in its own layer and then digitally signed by that supply chain partner.	Demonstration
M44	10.2.2.1	The very innermost shippedPedigree layer SHALL contain the starting point for the pedigree.	Demonstration
M45	10.2.2.1	The starting point for the pedigree SHALL always be an initialPedigree or a repackagedPedigree element.	Demonstration
M46	10.2.2.2	The LayerType elements SHALL be used to wrap the preexisting pedigree for a product.	Demonstration
M47	10.2.2.2	Signatures SHALL be applied over LayerType elements, signing over new content added to the pedigree and any prior pedigree content from previous transactions.	Demonstration
M48	10.2.2.2	At any given time, the outermost pedigree element SHALL contain a shippedPedigree and a Signature element, or a receivedPedigree and a Signature element.	Demonstration
M49	10.2.2.2	shippedPedigree - This layer element SHALL be added to the pedigree each time an exchange transaction occurs.	Demonstration

M50	10.2.2.2	receivedPedigree - This layer element SHALL be added to the pedigree each time a product is received as a result of an exchange transaction that requires that the pedigree be updated with the product receipt information and digitally signed.		Demonstration
M51	10.2.2.2	Signature - This element SHALL be added to the pedigree to sign over new content added in the preceding layer (shippedPedigree or receivedPedigree) in an exchange transaction.		Demonstration
M52	10.2.2.3	The shippedPedigreeType element SHALL wrap the preexisting pedigree (e.g., an initial pedigree, an initial pedigree for repackaged products, an unsigned received pedigree, or a pedigree received with a prior chain of custody) and adds information about the current transaction to the pedigree.		Demonstration
M53	10.2.2.3	The very innermost shippedPedigree layer SHALL contain the starting point for the pedigree.		DUPLICATE WITH M44
M54	10.2.2.3	transactionInfo - This element SHALL be added to the pedigree each time an exchange transaction occurs.		Demonstration
M55	10.2.2.4	The ReceivedPedigreeType element SHALL wrap the preexisting pedigree and adds information about the receipt to the pedigree.		Demonstration
M56	10.2.2.4	ReceivedPedigreeType - This element SHALL be later signed.		Demonstration
M57	10.2.2.5	The BaseExtensibleType SHALL be used for extensibility of pedigree schema elements.		Demonstration
M58	10.2.2.5	Extensibility SHALL be only allowed in Namespace ##other.		Demonstration
M59	10.2.2.5	serialNumber - This identifier SHALL be used to reference the pedigree by external systems.		Demonstration

M60	10.2.2.5	A new serial number SHALL be assigned each time the pedigree is updated and signed (in new shippedPedigree or receivedPedigree layer).		Demonstration
M61	10.2.2.6	serialNumber - This element SHALL be inserted into new initial pedigrees when they are first created.		Demonstration
M62	10.2.2.6	This element SHALL be referenced in new repackagedPedigree elements when the repackagedPedigree references an initialPedigree for a previous product.		Demonstration
M63	10.2.2.6	Software implementations SHALL accommodate pedigrees where this element is present and where it is not present.		Demonstration
M64	10.2.2.6	productInfo - This element SHALL be inserted in the pedigree when it is first created and SHALL occur only once.		Demonstration
M65	10.2.2.6	transactionInfo - This element SHALL be present when a wholesaler initiates the pedigree to record the transaction information from the sale from the manufacturer to the wholesaler.		Demonstration
M66	10.2.2.6	receivingInfo - This element SHALL be present when a wholesaler initiates the pedigree to record wholesaler's receipt information.		Demonstration
M67	10.2.2.6	altPedigree - This element SHALL be present when a wholesaler creates a pedigree based on a pedigree received that was in an alternate format.		Demonstration
M68	10.2.2.6	altPedigree - This element SHALL include the serialNumber element.		Demonstration
M69	10.2.2.6	wasRepackaged - This attribute SHALL be present and TRUE when an altPedigree represents a repackaged item.		Demonstration

M70	10.2.2.7	previousProducts - This element SHALL be repeated as many times as necessary to represent each product used to create the repackaged products.	Demonstration
M71	10.2.2.7	previousPedigrees - This element SHALL be repeated as many times as necessary to include the pedigree for each product used to create the repackaged products.	Demonstration
M72	10.2.2.7	previousPedigrees - This element SHALL be present when there is a regulatory requirement to include the source or “parent” pedigrees for the repackaged products.	Demonstration
M73	10.2.2.7	productInfo - This element SHALL be inserted in the pedigree when it is first created and occurs only once.	Demonstration
M74	10.2.2.8	The UnsigneddeceivedPedigreeType element SHALL wrap the preexisting pedigree and add information about the receipt to the pedigree, but does not get signed.	Demonstration
M75	10.2.2.8	Id - This element SHALL be used to reference the element that will be signed.	Demonstration
M76	10.2.2.8	transactionInfo - This element SHALL be used only when a seller updates the pedigree with a return transaction from the customer back to the seller, and this element SHALL be used only when regulations allow the seller to update the pedigree on behalf of their customer.	Demonstration
M77	10.2.2.9	The BaseExtensibleType SHALL be used for extensibility of pedigree schema elements.	Demonstration
M78	10.2.2.9	Extensibility SHALL be only allowed in Namespace ##other.	Demonstration
M79	10.2.2.11	The BaseExtensibleType SHALL be used for extensibility of pedigree schema elements.	Demonstration
M80	10.2.2.11	Extensibility SHALL be only allowed in Namespace ##other.	Demonstration

M81	10.2.2.11	A singular pedigree SHALL contain only one <code>itemInfo</code> and the <code>quantity</code> element SHALL contain "1".	Demonstration
M82	10.2.2.11	There SHALL be only one <code>itemSerialNumber</code> element present if the item is serialized, and this element SHALL contain the serial number associated with the product.	Demonstration
M83	10.2.2.11	If the product does not have a serial number, the <code>itemSerialNumber</code> SHALL be omitted.	Demonstration
M84	10.2.2.11	An aggregate pedigree SHALL contain as many <code>itemInfo</code> elements as there are lot numbers represented by the pedigree.	Demonstration
M85	10.2.2.11	The <code>quantity</code> element for each lot number SHALL represent the number of items in the lot.	Demonstration
M86	10.2.2.11	Except for the following special case, an <code>itemInfo</code> SHALL be added to a pedigree each time a new transaction is added to the pedigree to record the items that are the subject of the transaction.	Demonstration
M87	10.2.2.11	<code>expirationDate</code> - This element SHALL be present when there is a regulatory requirement to include the expiration date on the pedigree.	Demonstration
M88	10.2.2.11	<code>quantity</code> - For serialized items, this quantity SHALL match the number of <code>itemSerialNumber</code> entries.	Demonstration
M89	10.2.2.11	<code>itemSerialNumber</code> - If the physical product unit does not have a serial number, the <code>itemSerialNumber</code> SHALL be omitted.	Demonstration
M90	10.2.2.11	The total number of <code>itemSerialNumber</code> elements SHALL match the number of items specified in the <code>quantity</code> element.	Demonstration
M91	10.2.2.11	This element SHALL be present when there is a regulatory requirement to include the serial number associated with the saleable product unit on the pedigree.	Demonstration

M92	10.2.2.11	This SHALL NOT apply to products that are not serialized.	Demonstration
M93	10.2.2.12	altTransactionIdentifier - This element SHALL be used if it is desired to provide more than one transaction identifier in the pedigree (e.g., both the PO Number and the Invoice Number for the transaction).	Demonstration
M94	10.2.2.12	transactionDate - The date associated with the transactionIdentifier (e.g., PO, Invoice, etc). This element SHALL be paired with the transactionIdentifier element.	Demonstration
M95	10.2.2.13	The BaseExtensibleType SHALL be used for extensibility of pedigree schema elements.	Demonstration
M96	10.2.2.13	Extensibility SHALL be only allowed in Namespace ##other.	Demonstration
M97	10.2.2.13	shippingAddress - This element SHALL be present when there is a regulatory requirement to record the shipping address when it differs from the business address (this typically applies to both the sender business address and ship-from address and the recipient business address and ship-to address).	Demonstration
M98	10.2.2.13	licenseNumber - This element SHALL be present when there is a regulatory requirement to include the license information for the trading partner on the pedigree.	Demonstration
M99	10.2.2.13	contactInfo - This element SHALL be present when there is a regulatory requirement to include authenticator contact information on the pedigree.	Demonstration
M100	10.2.2.19	For signing information, name and title SHALL be present.	Demonstration
M101	10.2.2.19	For authenticator information, name, telephone, and email SHALL be present.	Demonstration

M102	10.2.2.19	The BaseExtensibleType SHALL be used for extensibility of pedigree schema elements.	Demonstration
M103	10.2.2.19	Extensibility SHALL be only allowed in NameSpace ##other.	Demonstration
M104	10.2.2.20	itemInfo - The items received SHALL be equal to or a subset of the items expressed in the itemInfo of the shippedPedigree.	Demonstration
M105	10.2.2.20	itemInfo - This element SHALL be repeated as many times as necessary to represent items received against each lot number represented by the pedigree for the product.	Demonstration
M106	10.2.2.20	The BaseExtensibleType SHALL be used for extensibility of pedigree schema elements.	Demonstration
M107	10.2.2.21	Extensibility SHALL be only allowed in NameSpace ##other.	Demonstration
M108	10.2.2.21	serialNumber - This element SHALL be inserted into new alternate pedigrees when they are first created.	Demonstration
M109	10.2.2.21	serialNumber - This element SHALL be referenced in new repackagedPedigree elements when the repackagedPedigree references an altPedigree for a previous product.	Demonstration
M110	10.2.2.21	contentType - The MIME type of the content that SHALL be included with the pedigree specified in standard type/subtype representation (e.g., text/plain, application/pdf, image/jpeg).	Demonstration
M111	10.2.2.21	encoding - Only base 64 binary encoding is supported and the value of this element SHALL be base64binary.	Demonstration
M112	10.2.2.22	PreviousProductType - This element SHALL be repeated as many times as necessary to represent each product used to create the repackaged products.	Demonstration

M113	10.2.2.22	serialNumber - This element SHALL reference a serial number of an initialPedigree, altPedigree, Or pedigree that is defined in the previousPedigrees element.	Demonstration
M114	10.2.2.22	serialNumber - Software implementations SHALL accommodate pedigrees where this element is present and where it is not present.	Demonstration
M115	10.2.2.22	previousProductInfo - This element SHALL be a cross-reference to the productInfo:drugName when the previousProduct references an initialPedigree Or pedigree.	Demonstration
M116	10.2.2.22	itemInfo - The items referenced SHALL be equal to or a subset of the items expressed in the itemInfo of the parent pedigrees.	Demonstration
M117	10.2.2.22	itemInfo - This element SHALL be repeated as many times as necessary to represent items used in the repackaging against each lot number represented by the pedigree for the parent product.	Demonstration
M118	10.2.2.23	drugName - This element SHALL be a cross-reference to the productInfo:drugName when the previousProduct references an initialPedigree Or pedigree.	Demonstration
M119	10.2.2.24	PreviousPedigreeType - This element SHALL be repeated as many times as necessary to represent each product used to create the repackaged products.	Demonstration
M120	10.2.2.24	pedigree - This element SHALL be used if the pedigrees were received in the standard electronic format.	Demonstration
M121	10.2.2.25	The BaseExtensibleType SHALL be used for extensibility of pedigree schema elements.	Demonstration

M122	10.2.2.25	Extensibility SHALL be only allowed in NameSpace ##other ensures that any extensibility in targetNameSpace goes through the normal EPCglobal vetting process.		Demonstration
M123	10.2.2.26	EncodingType - The value SHALL be "base64binary"		Demonstration
M124	10.2.2.27	If one of the NDC enumerations is used, the NDC SHALL be expressed as a contiguous string with no dashes separating the segments.		Demonstration
M125	10.2.2.31	The following table defines the elements that SHALL be signed when certifying pedigrees that support the self-authenticating pedigree model specified in pedigree regulations.  1) The signature element signs the outermost shippedPedigree element, thereby signing the entire pedigree content, including prior pedigree transactions nested in the interior Pedigree element		Demonstration
M126	10.2.2.31	The following table defines the elements that SHALL be signed when certifying pedigrees that support the self-authenticating pedigree model specified in pedigree regulations.  2) The signature element signs the outermost receivedPedigree element, thereby signing the receiving information added and the prior pedigree transactions nested in the interior Pedigree element.		Demonstration
M127	10.3	The pedigree envelope SHALL be a schema available to the user as an option.		Demonstration
M128	10.3.2.1	The BaseExtensibleType SHALL be used for extensibility of pedigree envelope schema elements.		Demonstration
M129	10.3.2.1	Extensibility SHALL be only allowed in NameSpace ##other.		Demonstration

M130	10.3.2.1	serialNumber - This identifier SHALL be expressed using a UUID 128-bit identifier as defined in RFC 4122, including the “urn:uuid” namespace prefix.		Demonstration
M131	10.3.2.2	ContainerType - This information SHALL be optional in the pedigree envelope, and is intended to provide a standard approach to conveying pedigree matching information for products that are not individually serialized.		Demonstration
M132	10.3.2.2	The BaseExtensibleType SHALL be used for extensibility of pedigree envelope schema elements.		Demonstration
M133	10.3.2.2	Extensibility SHALL be only allowed in NameSpace ##other.		Demonstration
M134	10.3.2.2	container - This element SHALL be used to express subcontainers that have pedigrees associated with items in those subcontainers.		Demonstration
M135	10.3.2.2	pedigreeHandle - If a pedigree represents multiple lots of the same product, a separate pedigreeHandle element SHALL be included for each unique lot represented by the pedigree.		Demonstration
M136	10.3.2.3	The BaseExtensibleType SHALL be used for extensibility of pedigree envelope schema elements.		Demonstration
M137	10.3.2.3	Extensibility SHALL be only allowed in NameSpace ##other.		Demonstration
M138	10.3.2.3	A pedigreeHandle element SHALL always include the pedigree serialNumber.		Demonstration
M139	10.3.2.3	If the products represented by the pedigree are serialized items, the pedigreeHandle SHALL include the itemSerialNumber for each serialized item represented by the pedigree.		Demonstration

M140	10.3.2.3	If the products represented by the pedigree are not serialized items, the <code>pedigreeHandle</code> MAY include the <code>productCode</code> and SHALL include the <code>quantity</code> and <code>lot</code> elements for the lot of product represented by the pedigree.	Demonstration
M141	10.3.2.3	If a pedigree represents multiple lots of the same product, a separate <code>pedigreeHandle</code> element SHALL be included for each unique lot represented by the pedigree.	Demonstration
M142	10.3.2.3	<code>itemSerialNumber</code> - This element SHALL be present only when the individual product items are serialized and SHALL be repeated multiple times, one for each item serial number.	Demonstration
M143	10.3.2.3	<code>productCode</code> - If present, this element SHALL reflect the <code>productCodes</code> enumerated in the <code>productCode</code> element of the corresponding pedigree.	Demonstration
M144	10.3.2.3	<code>quantity</code> - This element SHALL be present if the individual product items are not serialized.	Demonstration
M145	10.3.2.3	<code>lot</code> - This element SHALL be present if the individual product items are not serialized.	Demonstration
M146	10.3.2.4	The <code>BaseExtensibleType</code> SHALL be used for extensibility of pedigree envelope schema elements.	Demonstration
M147	10.3.2.4	Extensibility SHALL be only allowed in <code>NameSpace ##other</code> ensures that any extensibility in <code>targetNameSpace</code> goes through the normal EPCglobal vetting process.	Demonstration
M148	8	The ePedigree SHALL be captured and delivered as a single immutable document.	Demonstration
M149	8	The transfer of ePedigree documents SHALL conform to a push based transfer.	Demonstration

M150	8	The transfer SHALL occur via secure and, if transmitted over the public internet, authenticated mechanisms.	Demonstration
M151	8	If transmitted over the public internet, the transfer SHALL meet the expectation of Non-Repudiation.	Demonstration
M152	9.1	The “version” field of the documentInfo elements SHALL contain the date string that reflects the date of the schema XSD file used.	Demonstration
M153	9.1	<p>The string SHALL be composed like this:</p> <p style="text-align: center;">CCYYMMDD</p> <p>Where CC is the century, “20” for example</p> <p>YY is the year, “06” for example</p> <p>MM is the month, “02” for example</p> <p>DD is the day of the month, “05” for example.</p> <p>The date string for the example pre-standard schema version would be “20060205”.</p>	Demonstration
M154	9.1	The same technique SHALL be used to identify the use of this specific pedigree envelope schema version when creating production pedigree envelope documents prior to its adoption as a standard by EPCglobal or other body.	Demonstration
M155	9.1	The “version” field of the pedigreeEnvelope element SHALL contain the date string that reflects the date of the schema XSD file used.	Demonstration

M156	9.2	Once the pedigree and pedigree envelope schemas are adopted as a standard, the namespace SHALL be used to identify the major version.	Demonstration
M157	9.2	The “version” field of the documentInfo elements SHALL be used to identify minor releases between major versions.	Demonstration
M158	9.4	The Pedigree schema that is adopted as a standard SHALL be backwards compatible with the pre-standard interim version of the Pedigree schema.	Demonstration
M159	9.4	The Pedigree schema that is adopted as a standard SHALL support nesting of pedigrees created with the pre-standard interim version of the Pedigree schema within one of the pedigree LayerTypes and SHALL maintain the integrity of the digitally signed content of the interim pedigree layers.	Demonstration
M160	9.4	Pedigrees and pedigree envelopes created using this Standard (after the interim version) SHALL express pedigree and envelope serial numbers using the UUID in URN format using an xs:string element per RFC 4122.	Demonstration
M161	9.4	Implementations SHALL support pedigree and pedigree envelope serial numbers with and without the “urn:uuid” namespace prefix to preserve backwards compatibility to pedigrees generated prior to the release of the Standard.	Demonstration
M162	9.5.1	Pedigree implementations SHALL support nesting of pedigrees with an older minor version of the Pedigree schema within a new pedigree LayerType that is of a newer minor version of the Pedigree schema, within the same major version of the Pedigree schema.	Demonstration

M163	9.5.2	Pedigree implementations SHALL support nesting of pedigrees with an older major version of the Pedigree schema within a new pedigree LayerType that is of a newer major version of the Pedigree schema.	Demonstration
M164	9.5.3	Pedigree implementations SHALL support nesting of pedigrees with a newer minor version of the Pedigree schema within a new pedigree LayerType that is of an older minor version of the Pedigree schema, within the same major version of the Pedigree schema.	Demonstration
M165	9.5.4	Pedigree implementations SHALL NOT allow nesting of new layers to pedigrees that already contain layers that use a newer major version of the Pedigree schema when the new pedigree layer would use an older major version of the Pedigree schema.	Design
M166	9.5.4	At the time the major new version is adopted the EPCglobal work group shall publish the date based on this estimate as the first date that trading partners SHALL be able to receive pedigrees based on the new major schema version.	Design
M167	9.5.4	Trading partners SHALL NOT create pedigrees based on the new major schema version prior to that date even if their software is fully upgraded early.	Demonstration
M168	10.3.2.2	ContainerCode - If case serialization information is not available this element MAY represent a "null" value. The "null" value SHALL be represented using XML schema's nil mechanism (e.g., <containerCode xsi:nil="true"></containerCode>).	Demonstration

174 **7.2. Optional Requirements Matrix**

175 The following table outlines those functional requirements that are defined as optional by  
 176 the Drug Pedigree Specification

Req. No.	Protocol SubClause	Requirements (Requirements, Command, ...)	Applies to (ref)	How Verified (by Demonstration or by Design)
O1				
O2				

177

178 **8. Test Case Requirements**

179 A Drug Pedigree Conformance Certification Program will test an  
 180 Implementation Under Test (IUT) according to predefined test case  
 181 requirements that have been designed to isolate and test specific features  
 182 and functions of the Drug Pedigree 1.0 Specification.

183

184 Following table outlines the test scenarios and test numbers those are  
 185 covered under those scenarios.

186

No.	Test Scenario	Test numbers
1	Manufacturer sells drugs to wholesaler and wholesaler distributes these drugs to retailers.	TCR-01, TCR-02, TCR-03
2	Repackager initiates pedigree flow for a repackaged product (Product B) after repackaging the source product (Product A).	TCR-04, TCR-05
3	Kit manufacturer creates a Kit called Kit A which includes three products, Product A, Product B and Product C. Regulations requires pedigrees for Product A and Product B to be included in the kit pedigree. But there is no regulatory requirement for Product C. Kit manufacturer then sells this kit to wholesaler.	TCR-06, TCR-07
4	Wholesaler ships partial amount from inbound pedigree (non-serialized)	TCR-08

5	Wholesaler ships all product from inbound pedigree (non-serialized)	TCR-09
6	Wholesaler ships partial amount from inbound pedigree (serialized)	TCR-10
7	Wholesaler ships all product from inbound pedigree (serialized)	TCR-11
8	Wholesaler receives signed pedigree from manufacturer and certifies for receipt of full quantity.	TCR-12, TCR-P13
9	Wholesaler receives signed pedigree from manufacturer and certifies for receipt of partial quantity.	TCR-P14, TCR-P15
10	Wholesaler receives signed pedigree from manufacturer and updates with receipt information without applying a signature.	TCR-16, TCR-17
11	Wholesaler updates pedigree with receipt information on behalf of customer for a return transaction without applying a signature.	TCR-18
12	Backwards compatibility between major versions of schema.	TCR-19
13	Mapping for a Pedigree Referring to Products in a Single Serialized Case	TCR-20
14	Mapping for a Pedigree Referring to Products in a Multi Serialized Case	TCR-21
15	No Mapping for a Pedigree Referring to Products Case	TCR-22
16	Mapping for a Pedigree Referring to Products in a Non Serialized Case	TCR-23

187

## 8.1.2. Test Cases

200

### 8.1.2.1. Test Case Requirement - Verification of

201

InitialPedigree element and its content for serialized products

202

when pedigree is initiated by Manufacturer

<b>TPId:</b> TCR-01
<b>Requirement Purpose:</b> To verify that the InitialPedigree and its content comply with the specification when the electronic pedigree for serialized product is initiated by Manufacturer.
<b>Requirement Tested:</b> M32, M33, M34, M35, M45, M61, M64, M85, M86, M87, M88, M90, M124
<b>IUT role:</b> Manufacturer.
<b>Pre-test conditions:</b>
<ul style="list-style-type: none"> <li>IUT is running and operational.</li> </ul>

Step	Step description	Expected results
1	Provide Test Data to IUT in supported format. Test Data should contain the information required for this test.	<p>Verify that a pedigree is received from IUT. Verify that the received pedigree contains the following items correctly:</p> <ol style="list-style-type: none"> <li>1. InitialPedigree that contains the desired serial number, product info and item info.</li> <li>2. Product info (inside the InitialPedigree) that contains desired drug name, manufacturer name, dosage, strength, container size and single or multiple entries of product code.</li> <li>3. Product code value (inside productCode) is a contiguous string</li> <li>4. Item info (inside the InitialPedigree) that contains the lot number, expiration date, quantity and item serial numbers. The total number of itemSerialNumber elements should match the number of items specified in the quantity element.</li> </ol>

203

204

205

206

**8.1.2.2. Test Case Requirement - Verification of backward compatibility with interim schema supported by IUT**

**TPIId:** TCR-02

<p><b>Requirement Purpose:</b> To verify that IUT supports backward compatibility with interim schema. Backward compatibility is tested by receiving a pedigree into IUT which is of interim version and continuing that pedigree by adding new pedigree layer to it using current schema version.</p> <p><b>Requirement Tested:</b> M63</p>		
<p><b>IUT role:</b> Wholesaler</p>		
<p><b>Pre-test conditions:</b></p> <ul style="list-style-type: none"> <li>• IUT is running and operational.</li> <li>• IUT should use a standard schema version which is newer than “20060418”.</li> <li>• Provide Test Data to IUT to create a pedigree.</li> <li>• Test Data should contain enough information necessary to create a complete shipped pedigree to represent a sale of drugs from wholesaler to retailer.</li> </ul>		
Step	Step description	Expected results
1	Send a pedigree to IUT representing sale of drugs from manufacturer to wholesaler, initiated by manufacturer. This pedigree should be created using pedigree schema version “20060418”.	Demonstrate that pedigree is received by IUT.
2	Provide Test Data to IUT to continue the pedigree received in step 1 above. This Test Data represents sale of drugs from wholesaler to retailer with quantity of drugs remaining same as received from manufacturer. Use data listed in scenario 1. Provide data in the format supported by IUT. Use current pedigree version to create this new layer of pedigree representing sale from wholesaler to retailer.	Verify that a pedigree is received from IUT. Verify that the received pedigree contains the following items correctly: <ol style="list-style-type: none"> <li>1. InitialPedigree that contains the product info and item info. serialNumber element should not be present in InitialPedigree.</li> <li>2. DocumentInfo (inside innermost shippedPedigree) that contains version string “20060418”.</li> </ol>

207

208

209

210

**8.1.2.3. Test Case Requirement - Verification of InitialPedigree element and its content when pedigree is initiated by Wholesaler**

**TPId:** TCR-03

**Requirement Purpose:** To verify that the InitialPedigree and its content comply with the specification when the electronic pedigree is initiated by Wholesaler.

**Requirement Tested:** M65, M66, M93, M94

**IUT role:** Wholesaler

**Pre-test conditions:**

- IUT is running and operational.
- Provide Test Data to IUT to create a pedigree.
- Test Data should contain enough information necessary to describe the sale from manufacturer to wholesaler and to create a complete shipped pedigree to represent a sale of drugs from wholesaler to retailer.
- Regulation requires more than one transaction identifier to be included in the pedigree.

Step	Step description	Expected results
1	Provide Test Data to IUT in supported format. Test Data should contain the information required for this test.	Verify that a pedigree is received from IUT. Verify that the received pedigree contains the following items correctly: <ol style="list-style-type: none"> <li>1. InitialPedigree that contains the desired serial number, product info, item info, transaction info and receiving info.</li> <li>2. TransactionInfo that contains sender info, recipient info, transaction identifier, transaction type, transaction date and altTransactionIdentifier.</li> <li>3. ReceivingInfo that contains date of receipt and information about received items.</li> </ol>

211

212

213 **8.2. Test Scenario – 2: Repackager initiates pedigree flow**  
 214 **for a repackaged product (Product B) after repackaging**  
 215 **the source product (Product A)**

216 **8.2.1. Test Data**

217 The following table contains sample data for Repackager to use while repackaging a  
 218 source product A

Data Elements	Data Value
Data for Previous Product	
Drug Name	“Product A”

## 8.2.2. Test Cases

226

### 8.2.2.1. Test Case Requirement – Verification of

227

RepackagedPedigree element and its content when pedigree

228

flow is initiated by Repacker for a repackaged item

<b>TPId:</b> TCR-04		
<b>Requirement Purpose:</b> To verify that the RepackagedPedigree and its content comply with the specification when the electronic pedigree flow is initiated by Repacker for a repackaged item.		
<b>Requirement Tested:</b> M115, M118		
<b>IUT role:</b> Repacker.		
<b>Pre-test conditions:</b>		
<ul style="list-style-type: none"> <li>• IUT is running and operational.</li> <li>• Provide Test Data to IUT to initiate a pedigree.</li> <li>• Test Data should contain enough information necessary to create a complete shipped pedigree to represent a sale of drugs from repacker to wholesaler.</li> <li>• Regulation requires previous pedigree to be included in the pedigree.</li> <li>• Manufacturer does not provide pedigree, Repackager initiates pedigrees for source products</li> </ul>		
<b>Step</b>	<b>Step description</b>	<b>Expected results</b>

1	Provide Test Data to IUT in supported format. Test Data should contain the information required for this test.	<p>Verify that a pedigree is received from IUT. Verify that the received pedigree contains the following items correctly:</p> <ol style="list-style-type: none"> <li>1. RepackagedPedigree that contains the desired previous products, previous pedigrees, product info and item info elements.</li> <li>2. PreviousProducts (inside the RepackagedPedigree) that contains previous product info, item info, contact info and serial number. This serial number should match the serial number contained in InitialPedigree which is inside previousPedigrees</li> <li>3. PreviousProductInfo that contains drug name, manufacturer name and product code. These drug name, manufacturer name and product code should match with the respective information contained in InitialPedigree which is inside previousPedigrees</li> </ol>

231

232

**8.2.2.2. Test Case Requirement – Verification of backward compatibility with interim schema supported by IUT**

<b>TPIId:</b> TCR-05
<p><b>Requirement Purpose:</b> To verify that IUT supports backward compatibility with interim schema when pedigree flow is initiated by Repacker for a repackaged item.</p> <p>Backward compatibility is tested by receiving a pedigree into IUT which is of interim version and continuing that pedigree by adding new pedigree layer to it using current standard version.</p> <p><b>Requirement Tested:</b> M114</p>

<b>IUT role:</b> Wholesaler		
<b>Pre-test conditions:</b>		
<ul style="list-style-type: none"> <li>• IUT is running and operational.</li> <li>• IUT should use a standard schema version which is newer than “20060418”.</li> <li>• Provide Test Data to IUT to create a pedigree.</li> <li>• Test Data should contain enough information necessary to create a complete shipped pedigree to represent a sale of drugs from wholesaler to downstream trading partner.</li> </ul>		
<b>Step</b>	<b>Step description</b>	<b>Expected results</b>
1	Send a pedigree to IUT. This pedigree should be created using pedigree schema version “20060418” and should represent a sale of drugs from repacker to wholesaler.	Demonstrate that pedigree is received by IUT.
2	Provide a set of data to demonstrate that the pedigree received in step 1 can be continued by adding a new layer of pedigree to represent further sale from wholesaler to a downstream trading partner. Provide data input to IUT in supported format.	<p>Verify that a pedigree is received from IUT. Verify that the received pedigree contains the following items correctly:</p> <ol style="list-style-type: none"> <li>1. RepackagedPedigree (inside innermost shippedPedigree) that contains the previous product info, product info and item info. SerialNumber should not be present inside previousProducts.</li> <li>2. DocumentInfo (inside innermost shippedPedigree) that contains version string “20060418”.</li> </ol>

233

234 **8.3. Test Scenario – 3: Kit manufacturer creates a Kit called**  
 235 **Kit A which includes three products, Product A, Product B**  
 236 **and Product C.**

237 Regulations require pedigrees for Product A and Product B to be included in the kit  
 238 pedigree. But there is no regulatory requirement for Product C. Kit manufacturer then  
 239 sells this kit to wholesaler.

240  
241

243

### 8.3.1. Test Data

Following table contains sample data for Kit manufacturer to use while preparing a Kit which includes three products A, B and C.

Data Elements	Data Value
Details of first source product A	
Drug Name	"Product A"
Manufacturer	"Acme Laboratories"
Product Code Type	NDC442
Product Code Value	"3333-0014-06"
Dosage form	Tablets
Strength	60 mg
Container size	10
Item Info	
Lot	"1234-A"
Expiration Date	05/01/2011
Quantity	"100"
Contact Info	
Name	"Jane Smith"
Title	"Manager"
Telephone	"800-521-6010"
Email	"jsmith@acme.com"
URL	"www.acme.com"
Details of second source product B	
Drug Name	"Product B"
Manufacturer	"Acme Laboratories"
Product Code Type	NDC442
Product Code Value	"5896-0014-07"
Dosage form	Tablets
Strength	60 mg
Container size	10

Item Info	
Lot	"5678-B"
Expiration Date	05/01/2011
Quantity	"5"
Contact Info	
Name	"Jane Smith"
Title	"Manager"
Telephone	"800-521-6010"
Email	"jsmith@acme.com"
URL	"www.acme.com"
Details of third source product C	
Drug Name	"Product C"
Manufacturer	"Omega medical supplies"
Product Code Type	'CatalogNumber'
Product Code Value	"229065-XZ"
Item Info	
Lot	"223"
Expiration Date	09/11/2015
Quantity	"5"
Contact Info	
Name	"Jane Smith"
Title	"Manager"

**8.9.2.2. Test Case Requirement - Verification of forwards compatibility with minor version of schema**

<b>TPId:</b> TCR-15		
<p><b>Requirement Purpose:</b> To verify that the ReceivedPedigree and its content comply with the specification for forwards compatibility between minor versions of the schema using the pre-standard version of the schema. The test will verify the ability to receive a pedigree from a manufacturer in the standard version and then send out a pedigree in the interim version of the schema.</p> <p><b>Requirement Tested:</b> M164</p> <p>***Note: It is unclear if requirement M164 is a future requirement for when a new minor version of the schema becomes available. The ability to produce a pedigree in the Interim Standard has never been an EPCglobal requirement, however the use of the Interim Standard could help satisfy this test. This test may be deferred to the future if it is deemed inappropriate to use the Interim Standard in a forward compatibility fashion.</p>		
<b>IUT role:</b> Wholesaler.		
<p><b>Pre-test conditions:</b></p> <ul style="list-style-type: none"> <li>• IUT is running and operational.</li> <li>• Provide test data to IUT to create a pedigree.</li> <li>• Expiration date is a required element.</li> <li>• Manufacturer pedigree is for serialized items.</li> <li>• Test data should contain enough information necessary to create a complete shipped pedigree along with the receiving information to represent a sale of drugs from manufacturer to wholesaler.</li> </ul>		
<b>Step</b>	<b>Step description</b>	<b>Expected results</b>
1	IUT receives a pedigree.	<p>Verify that a pedigree is received from IUT. Verify that the pedigree contains the following items correctly:</p> <ol style="list-style-type: none"> <li>1. ## 8.10.2. Test Cases

334

### 8.10.2.1. Test Case Requirement - Verification of a pedigree received from manufacturer for serialized items and updated with receipt of full quantity without applying a signature.

335

336

337

<b>TPId:</b> TCR-16
<b>Requirement Purpose:</b> To verify that the UnsignedReceivedPedigree and its content comply with the specification when the electronic pedigree for serialized product from multiple lots is received by a wholesaler from a manufacturer, updated for receipt of the full quantity, without applying a signature. The manufacturer pedigree contains extension data.
<b>Requirement Tested:</b> M23, M24, M25, M26, M27, M28, M42, M74, M75, M82, M88, M90, M104, M105, M121, M122
<b>IUT role:</b> Wholesaler.

**Pre-test conditions:**

- IUT is running and operational.
- Provide test data to IUT to create a pedigree.
- Expiration date is a required element.
- Manufacturer pedigree is for serialized product from multiple lots and contains extension data.
- Test data should contain enough information necessary to create a complete shipped pedigree along with the receiving information to represent a sale of drugs from manufacturer to wholesaler.

Step	Step description	Expected results
1	IUT receives a pedigree.	<p>Verify that a pedigree is received from IUT. Verify that the pedigree contains the following items correctly:</p> <ol style="list-style-type: none"><li>1. Pedigree element with the pedigree major version specified in the namespace. (M23)</li><li>2. shippedPedigree element (inside the Pedigree element) with a unique id attribute. (M24, M25)</li><li>3. documentInfo element (inside the shippedPedigree element) containing the unique pedigree serialNumber in URN UUID format and the pedigree schema minor version in the version element. (M24, M25)</li><li>4. Extension data in the documentInfo element using the BaseExtensibleType containing the documentDate. (M121, M122)</li><li>5. initialPedigree, itemInfo, transactionInfo, signatureInfo (inside the shippedPedigree element) provided by the manufacturer. The itemInfo element contains two itemInfo elements containing the lot, expirationDate, quantity, and itemSerialNumber elements for the</li></ol>

		<p>items in the two lots received. (M24, M25)</p> <p>6. Signature element (inside the Pedigree element and signing the shippedPedigree element) containing the digital signature provided by the manufacturer. (M24, M25)</p>
2	IUT applies receiving information to pedigree with no signature.	<p>Verify that the pedigree is updated with the receiving information for the full quantity receipt without applying a signature. Verify that the pedigree contains the following items correctly:</p> <ol style="list-style-type: none"> <li>1. unsignedReceivedPedigree element with a unique id attribute, and wrapping the complete Pedigree that was received and adding information about the receipt. (M24, M25, M26, M27, M28, M74, M75)</li> <li>2. documentInfo element (inside the unsignedReceivedPedigree element) containing the unique pedigree serial number in the URN UUID format in the serialNumber element and the pedigree schema minor version in the version element. (M24, M25, M27, M42)</li> <li>3. Complete Pedigree element for the pedigree that was received from the manufacturer in step 1 (inside the unsignedReceivedPedigree element). (M23, M24, M25, M27)</li> <li>4. receivingInfo element (inside the unsignedReceivedPedigree element) containing the dateReceived and itemInfo elements. Two itemInfo elements containing the lot, expirationDate, quantity, and</li> </ol>

		itemSerialNumber elements for the items in the two lots received. (M24, M25, M26, M27, M42, M82, M88, M90, M104, M105)

## 8.11.2. Test Cases

358

### 8.11.2.1. Verification of a pedigree updated by a wholesaler on behalf of customer for a return transaction of non-serialized items without applying a signature.

359

360

<b>TPId:</b> TCR-18		
<b>Requirement Purpose:</b> To verify that the UnsignedReceivedPedigree and its content comply with the specification when the electronic pedigree for non-serialized product is created by the wholesaler and provided to the customer, and then updated with the customer return transaction without applying a signature.		
<b>Requirement Tested:</b> M32, M33, M76		
<b>IUT role:</b> Wholesaler.		
<b>Pre-test conditions:</b>		
<ul style="list-style-type: none"> <li>• IUT is running and operational.</li> <li>• Provide test data to IUT to create a pedigree.</li> <li>• Expiration date is a required element.</li> <li>• Wholesaler pedigree is for non-serialized product.</li> <li>• Test data should contain enough information necessary to create a complete shipped pedigree along with the receiving information to represent a sale of drugs from manufacturer to wholesaler.</li> </ul>		
<b>Step</b>	<b>Step description</b>	<b>Expected results</b>

1	IUT creates a pedigree.	<p>Verify that a pedigree is created by IUT. Verify that the pedigree contains the following items correctly:</p> <ol style="list-style-type: none"> <li>1. initialPedigree element containing the serialNumber in URN UUID format, productInfo, itemInfo, transactionInfo, and receivingInfo elements with information from the sales transaction from the manufacturer to the wholesaler. The itemInfo element contains the lot, expirationDate and quantity elements for the non-serialized items sold from the manufacturer to the wholesaler.</li> </ol>
2	IUT applies sales transaction from wholesaler to pharmacy with signature and provides pedigree to pharmacy.	<p>Verify that the pedigree is updated with the transaction information and signed. Verify that the signed shipped pedigree contains the following items correctly:</p> <ol style="list-style-type: none"> <li>1. Pedigree element with the pedigree major version specified in the namespace.</li> <li>2. shippedPedigree element (inside the Pedigree element) with a unique id attribute.</li> <li>3. documentInfo element (inside the shippedPedigree element) containing the unique pedigree serialNumber in URN UUID format and the pedigree schema minor version in the version element.</li> <li>4. initialPedigree (created in step 1) and the itemInfo, transactionInfo and signatureInfo elements for the new sales transaction (inside the shippedPedigree element).</li> </ol>

		<p>5. Signature element (inside the Pedigree element and signing the shippedPedigree element) containing the digital signature provided by the wholesaler.</p>
3	<p>IUT applies return information to pedigree with no signature.</p>	<p>Verify that the pedigree is updated with the return information for the full quantity of the return without applying a signature. Verify that the pedigree contains the following items correctly:</p> <ol style="list-style-type: none"> <li>1. unsignedReceivedPedigree element with a unique id attribute, and wrapping the complete Pedigree that was originally shipped to the customer and adding information about the return.</li> <li>2. documentInfo element (inside the unsignedReceivedPedigree element) containing the unique pedigree serial number in the URN UUID format in the serialNumber element and the pedigree schema minor version in the version element.</li> <li>3. Complete Pedigree element for the pedigree that was originally shipped to the customer from step 2 (inside the unsignedReceivedPedigree element).</li> <li>4. transactionInfo element (inside the unsignedReceivedPedigree element) containing the senderInfo, recipientInfo, transactionIdentifier, transactionType and transactionDate. The senderInfo contains information about the customer making the return. The recipientInfo contains information about the wholesaler accepting the return. The</li> </ol>

		<p>transactionIdentifier contains the identifier and identifierType of the business document associated with the return transaction. The transactionType identifies the return transaction. The transactionDate contains the date of the return transaction (M32, M33, M76)</p> <p>5. receivingInfo element (inside the unsignedReceivedPedigree element) containing the dateReceived and itemInfo elements. The itemInfo element contains the lot, expirationDate and quantity elements for the items returned.</p>

## 8.12.2. Test Cases

369

370

### 8.12.2.1. Verification of a pedigree received from manufacturer with an older major version of the schema and updating of pedigree by wholesaler with a newer major version of the schema.

371

372

373

<b>TPId:</b> TCR-19
<b>Requirement Purpose:</b> To verify that the ReceivedPedigree and its content comply with the specification when the electronic pedigree for serialized product is received by a wholesaler from a manufacturer using an older major version of the schema, and

updated with receipt using a newer major version of the schema, and digitally signed.

**Requirement Tested: M163**

\*\*\* Note: Requirement M163 is a future requirement for when a new major version of the schema becomes available.

\*\*\* Note that Requirements M165, M166 and M167 are instructional requirements for how EPCglobal and trading partners should move forward with releasing future versions of schema and are not requirements that can be tested.

**IUT role:** Wholesaler.

**Pre-test conditions:**

- IUT is running and operational.
- Provide test data to IUT to create a pedigree.
- Expiration date is a required element.
- Test data should contain enough information necessary to create a complete shipped pedigree along with the receiving information to represent a sale of drugs from manufacturer to wholesaler.

Step	Step description	Expected results
1	IUT receives a pedigree.	<p>Verify that a pedigree is received from IUT. Verify that the pedigree contains the following items correctly:</p> <ol style="list-style-type: none"> <li>1. Pedigree element with the pedigree major version specified in the namespace. The major version is version 1. (M163)</li> <li>2. shippedPedigree element (inside the Pedigree element) with a unique id attribute.</li> <li>3. documentInfo element (inside the shippedPedigree element) containing the unique pedigree serialNumber in URN UUID format and the pedigree schema minor version in the version element.</li> <li>4. initialPedigree, itemInfo,</li> </ol>

		<p>transactionInfo, signatureInfo (inside the shippedPedigree element) provided by the manufacturer.</p> <p>5. Signature element (inside the Pedigree element and signing the shippedPedigree element) containing the digital signature provided by the manufacturer.</p>
2	<p>IUT applies receiving information to pedigree and digitally signs pedigree.</p>	<p>Verify that the pedigree is updated with the receiving information and that it is digitally signed. Verify that the pedigree contains the following items correctly:</p> <ol style="list-style-type: none"> <li>1. Pedigree element with the pedigree major version specified in the namespace, and wrapping the new receivedPedigree and Signature elements. The major version of the pedigree is version 2. (M163)</li> <li>2. receivedPedigree element (inside the Pedigree element) with a unique id attribute, and wrapping the complete Pedigree that was received and adding information about the receipt.</li> <li>3. documentInfo element (inside the receivedPedigree element) containing the unique pedigree serial number in the URN UUID format in the serialNumber element and the pedigree schema minor version in the version element.</li> <li>4. Complete Pedigree element for the pedigree that was received from the manufacturer in step 1 (inside the receivedPedigree element</li> </ol>

		<p>5. receivingInfo element (inside the receivedPedigree element) containing the dateReceived and itemInfo elements. The itemInfo element contains the lot, expirationDate, quantity, and itemSerialNumber elements for the partial quantity received.</p> <p>6. signatureInfo element (inside the receivedPedigree element) containing the signerInfo, signatureDate and signatureMeaning elements. The signerInfo contains the name and title elements.</p> <p>7. Signature element (inside the Pedigree element and signing the receivedPedigree element) containing SignedInfo, SignatureValue, and KeyInfo elements. The SignedInfo element contains the CanonicalizationMethod, SignatureMethod, and Reference elements. The Reference element contains the Transforms, DigestMethod and DigestValue elements. The KeyInfo element contains the X509Data element, with an X509IssuerSerial and X509Certificate element. The X509IssuerSerial element contains the X509IssuerName and X509SerialNumber elements.</p>
