1. Business Domain View

1.1. Problem Statement / Business Need

This business message standard enables the request and confirmation for an appointment to collect goods at a pick-up location or to deliver goods at a drop-off location.

Initial information about the collection and delivery of goods may already have been exchanged in the transport instruction. However, the party where the goods are collected (consignor / pick-up location / shipper / ship-from location) or delivered (consignee / drop-off location / receiver / ship-to location) will not in all cases be aware of the transport instruction details or they might have changed.

In the pick-up / drop-off request the carrier can specify delays or other relevant status information that might impact the time of collection or the time of delivery. In the pick-up / drop-off confirmation besides the detailed time and location (dock door) additional handling instructions might be included.

This scenario is beneficial for the time slot management at the pick-up and drop-off location. Planning of time slots (time slot allocation) at the pick-up and drop-off locations (dock door) is often critical because of the limited capacity of these locations.

1.2. Objective

This standard defines the transaction model and data model for the following business messages:

- Transport Pick-up Drop-off Request
- Transport Pick-up Drop-off Confirmation
