

The Global Language of Business

# GS1 Standards Event 2017

## 20-24 March 2017 – Jersey City, NJ

*Building standards to deliver business value*

Session: Lunch & Learn: Innovation Programme Update  
20 March, 2017 | Time: 12:30-1:30

---

Who may attend: Everyone!

Speaker: Kevin Stark, GS1 GO

# Goals

---

- Understand context for “Innovation”
- How is Innovation being approached within GS1 GO
- What’s happening in 2017

# How to reinvent a 125 year old company...

---

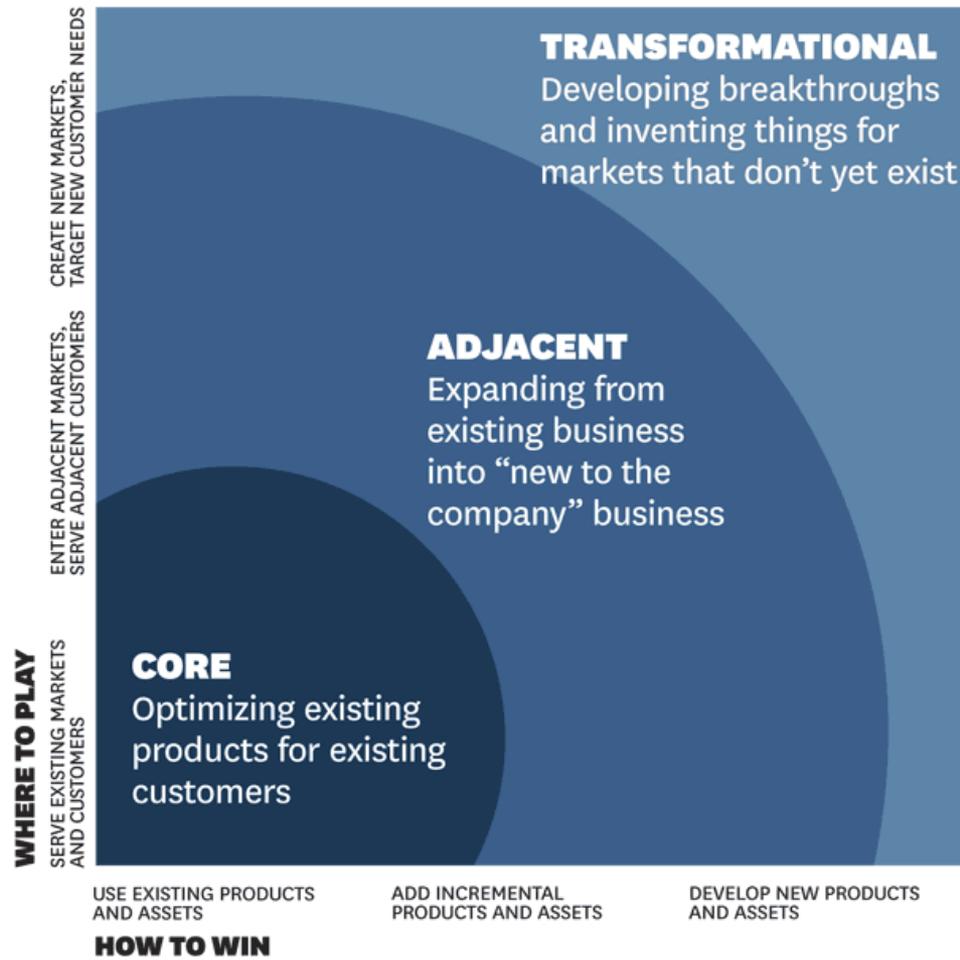

Image: Twitter @bethcomstock

“ To reinvent yourself, you have to constantly think about **what’s new, what’s next, and how do I adapt.** ”

- Beth Comstock, Vice Chair, GE

# The Innovation Ambition Matrix

# Innovation Program @ GS1

---

- Focused on extremely disruptive topics that create opportunities for big impact
- Innovation is grounded in the needs of industry
- Innovation exploration is empowered by a broad internal and external ecosystem

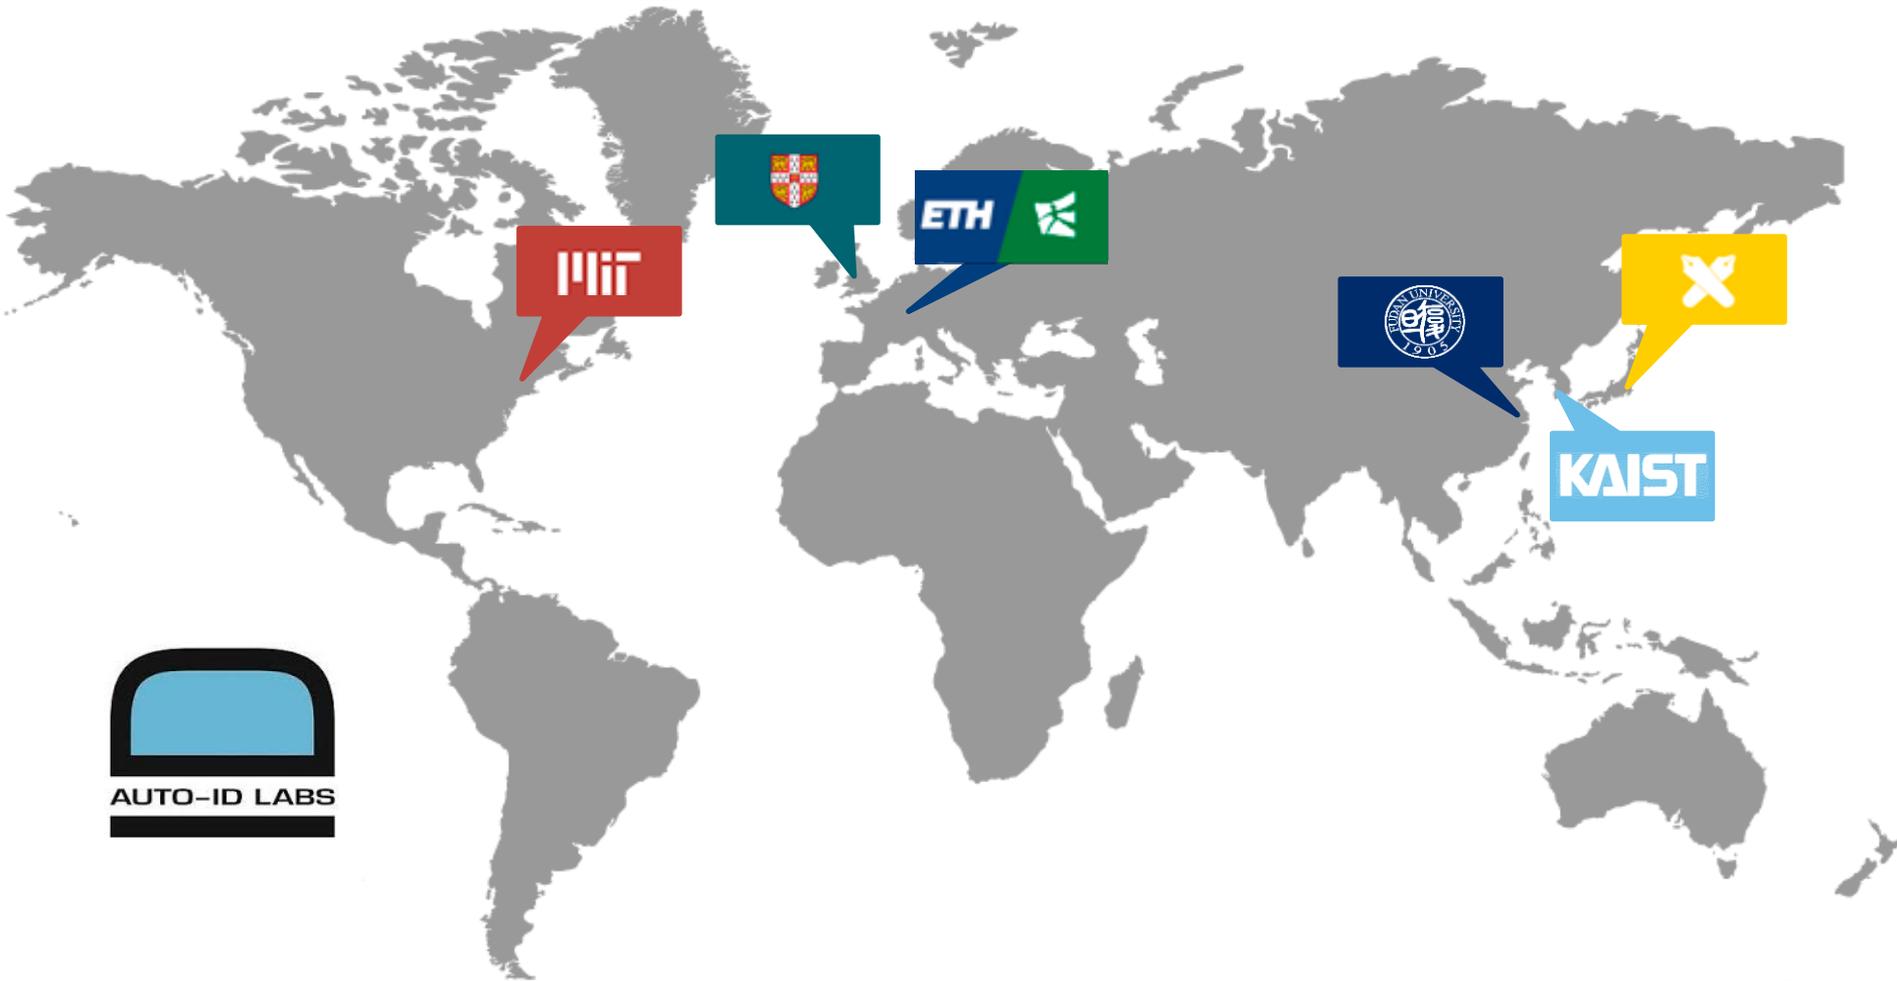

# Innovation Program @ GS1 (2017)

---

- Focused on extremely disruptive topics that create opportunities for big impact
  - Consumer Internet of Things
- Innovation is grounded in the needs of industry
  - Industry Engagement, GS1 Innovation Board
- Innovation exploration is empowered by a broad internal and external ecosystem
  - Connections with MOs
  - Forward-looking Research by AutoID Labs

# Auto-ID Labs

Network of six Research Institutions, furthering GS1's mission

# AutoID Labs Activities

---

- **Advancing Technologies**

- Traditional basic research (5-10 years)
- Value: Basic research to ensure we're on the fore-front of future technology developments

- **Applying GS1 Standards to new applications**

- Supports near-term adoption of GS1 standards (< 2 years)
- Value: Labs actively support regional initiatives to drive standards adoption by end users

- **Leveraging GS1 data to discover new capabilities**

- Medium-term development, but include current commercial deployment
- Value: Drives development of capabilities that can become value add services for GS1 or solution providers

# AutoID Labs Activities (2016 projects)

---

- **Advancing Technologies**

- Product Identification (VR/AR)
- RFID sensor crack detection
- Deep learning / machine vision
- Improved RFID Reader-on-a-Chip
- Sensor-enabled RFID tag
- Implantable glucose sensor
- Data analytics in healthcare
- Smart city pilot model
- Data mining / network science
- Tracking problems in logistics with data
- Energy harvesting sensors
- AIDC for visually impaired people

- **Applying GS1 Standards to new applications**

- Food safety (Chinese gov't)
- Disaster relief supply item management

- **Leveraging GS1 data to discover new capabilities**

- Scan & Go self-checkout (Valora)
- Food literacy app

# AutoID Labs Activities (GS1 sectors)

- **Advancing Technologies**

- Product Identification (VR/AR)
- RFID sensor crack detection
- Deep learning / machine vision
- Improved RFID Reader-on-a-Chip
- Sensor-enabled RFID tag
- Implantable glucose sensor
- Data analytics in healthcare
- Smart city pilot model
- Data mining / network science
- Tracking problems in logistics with data
- Energy harvesting sensors
- AIDC for visually impaired people

- **Applying GS1 Standards to new applications**

- Food safety (Chinese gov't)
- Disaster relief supply item management

- **Leveraging GS1 data to discover new capabilities**

- Scan & Go self-checkout (Valora)
- Food literacy app

# Scan & Go mobile Self-Checkout Pilot

## Self checkout adoption and usage studies

1) Check-in

2) Product scan

3) Basket overview

4) Payment Confirmation

5) Private Feedback

Right: Public feedback screen with store-specific QR-code for payment confirmation
