GSMP Electronic health record patient demographics in GS1 barcodes MSWG

Project Lead: Greg Rowe

Business purpose

The 2nd and final phase of the MSWG is to develop an implementation guideline to support the implementation of the Global Service Relation Number (GSRN) along with other complementary GS1 identifiers e.g., the Service Relation Instance Number(SRIN), AIDC Media Type Identifier, Version Control Number (VCN) and the newly created demographic identifiers.

Key issues and risks

- Recently a new Work Request was entered to create a new AI. If accepted, this new AI will impact the Implementation Guideline, making the guideline incorrect. At this time, we are holding off on motioning it to eBallot until the ID SMG decides on how to handle the Work Request. Once decided, we will update the expected project close date.

Accomplishments this period

- There has been no change since the last report and the note under 'Key issues and risks'.
- Once the SMG determines if a new AI is needed or not will determine the next step.

Upcoming period activities

- Unsure at this time, depending on outcome from SMG. If no new AI needed then:
  - Conduct eBallot
  - Ratify guideline
  - Close the MSWG
