

GSMP Electronic health record patient demographics in GS1 barcodes MSWG

Project Lead: Greg Rowe

Reporting Period: October 2025
Expected project close date: November 2025

Business purpose

The 2nd and final phase of the MSWG is to develop an implementation guideline to support the implementation of the Global Service Relation Number (GSRN) along with other complementary GS1 identifiers e.g., the Service Relation Instance Number (SRIN), AIDC Media Type Identifier, Version Control Number (VCN) and the newly created demographic identifiers.

Key issues and risks

- None at this time

Accomplishments this period

- Implementation Guideline passed eBallot
- Due to the large amount of updates, it took more time than expected to add them in. This was completed
- SME sent the Guideline to the GS1 Publication Manager for review and editing before eBallot.
 - The review process is almost complete as the GS1 I&S Event to priority

Upcoming period activities

- Conduct eBallot
- Ratify guideline
- Close the MSWG
